

# HTML Headings

---

<h1>-<h6>

search engines use the heading to index the structure and content of web pages

use different style

```
<h1 style="font-size:60px;">Heading 1</h1>
```

<hr>

defines a thematic break and displayed as a horizontal rule.

```
<h1>This is heading 1</h1>
```

```
<p>This is some text.</p>
```

<hr>

```
<h2>This is heading 2</h2>
```

```
<p>This is some other text.</p>
```

<hr>

<head>

The HTML <head> element has nothing to do with HTML headings.

The <head> element is a container for metadata. HTML metadata is data about the HTML document. Metadata is not displayed.

The <head> element is placed between the <html> tag and the <body> tag:

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<title>My First HTML</title>
```

```
<meta charset="UTF-8">
```

```
</head>
```

```
<body>
```

.

.
