

# HTML Elements

---

## Empty HTML Elements

`<br>` is an empty element without a closing tag (the `<br>` tag defines a line break).

empty elements can be "closed" in the opening tag like this: `<br/>`

HTML5 does not require empty elements to be closed. But if you want stricter validation, or if you need to make your document readable by XML parser, you must close all HTML elements properly.

## Use Lowercase Tags

HTML tags are not case sensitive `<p>` means the same as `<P>`
