

HTML JavaScript

A Taste of JavaScript

JavaScript can change HTML content

```
document.getElementById("demo").innerHTML = "Hello JavaScript!";
```

JavaScript can change HTML styles

```
document.getElementById("demo").style.fontSize = "25px";
```

```
document.getElementById("demo").style.color = "red";
```

```
document.getElementById("demo").style.backgroundColor = "yellow";
```

JavaScript can change HTML attributes

```
document.getElementById("image").src = "picture.gif";
```

The HTML <noscript> Tag

The <noscript> tag is used to provide an alternate content for users that have disabled scripts in their browser or have a browser that doesn't support client-side scripts:

```
<script>
```

```
document.getElementById("demo").innerHTML = "Hello JavaScript!";
```

```
</script>
```

```
<noscript>Sorry, your browser does not support JavaScript!</noscript>
```
